DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-9, 11, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Kammerer 5562684.
- 3. Kammerer teaches a suture shuttle comprising: a strand of flexible metallic material having two ends and formed into an elongated loop; a closure for holding the two ends of the strand together (FIG. 2); wherein the flexible metallic material comprises nitinol (col. 6, lines 54-59); where the closure comprises a shrink sleeve (Rod 70 is made of nitinol a "nickel-titanium mixture". Nickel-titanium mixtures are heat shrinkable as evidenced by US Patent 5403331 to Chesterfield et al. See col. 4, lines 1-11); a radius formed at the one of said ends opposite the closure (FIG. 2); having sufficient length to extend into a portal and out an accessory portal; having a length of about 22 inches (col. 5, lines 44-49).
- 4. Kammerer teaches a method of securing tissue to bone using a length of suture, the method comprising the steps of: installing a suture anchor with an attached suture strand in a portion of bone adjacent a section of tissue to be secured; piercing the tissue with a distal end of s suture passer; deploy a loop formed of flexible metal wire from the distal end of the suture passer; capturing the suture strand with the loop; passing the

captured suture strand through the tissue by retracting the loop through the tissue; wherein the suture stand is captured in the loop by threading the suture strand through a radius of the loop; and forming a knot between the suture strand and a second suture strand also attached to the suture anchor (FIGS. 26-33).

Allowable Subject Matter

5. Claims 10 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/646,827
